BENEFIT OF CI/CD

Sir I would like for our technical teams to go fully automation in IT infrastructure, there is a new technology called CI/CD. This consent of CI/CD will automate our work process and make us more money by generating features released more quickly.

Sir CI/CD stands for continues integration and continues deployment, CI allows us to write a code that will automate everything, avoid human error, Less bugs in production and less time testing that will avoid cost for us.

CD aid faster deployment, less time to market and reduce downtime from a deploy-related crash which will lead to increment in revenue.

In the case of where what was deploy did not meet customer requirement we can quickly undo to return production to working state and that will protect revenue for us.
